

Product Details

WD232 Outlet with Circular Flat Grating

Technical Data

Dimensions:

220 dia. at finish level
305 dia. body
119 - Height below Body Flange
78 to 105 - min/max height between membrane level and top of grating
81 - depth body flange to outlet center line
Connection - female 2" BSP threaded connection (50mm)
Free Area - body= 19cm², grating= 130cm²
Materials - Grating - ductile iron, sherardized; Body - cast iron, lacquered; Membrane Clamp - cast iron, lacquered
Load Rating Class - L15
Weight - 13.8 kg

General Description:

220 Dia. Cast Iron 3410 series (Medium Sump) No Fines Screed / Inverted Roof Outlet with Circular Flat Grating, for use with unfinished (eg. bare concrete) or paved areas, with 2" BSP dia. horizontal outlet.

Options:

To specify an option, add option letter(s) as a suffix to the Spec. Code

K - bonded insulation jacket

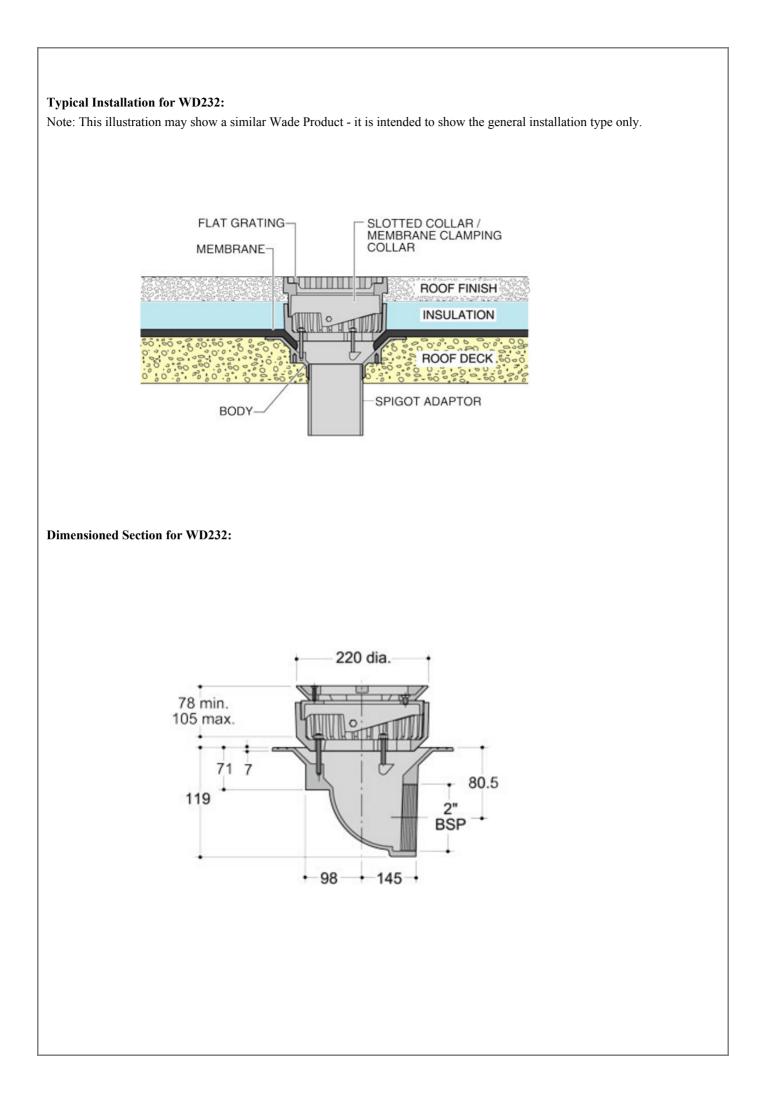

Z - rigid PVC flange for use with PVC single ply membranes

Materials:

Cast Iron - BS EN 1561: Used for bodies, membrane clamping collars, spigot adaptors and accessories such as extensions. A widely used metal in the drainage industry, its resistance to corrosion permits extended use under extreme conditions. Castings are coated with a high grade lacquer paint to provide internal and external surface coverage. Paint will gradually wear off and is replaceable; oxidisation (surface rusting) is a natural process which does not weaken the material. A zinc anti-corrosion coating is applied to certain castings by sherardizing.

Ductile Iron - BS EN 1563 + 1564: A casting with the ductility of steel, yet with more than twice the tensile strength of cast iron. A zinc anti-corrosion coating is applied by sherardizing.

All dimensions are in millimetres unless stated. In line with general practice all dimensions shown are nominal.

Flow Performance Figures for WD232:

Head of water at outlet	15mm	20mm	25mm	30mm	35mm	40mm	50mm
Flow Rate (l/s):	1.76	2.33	2.35	2.45	2.53	2.57	2.66
Roof area drained (m²) at 0.021 l/s per m² rainfall rate:	84	111	112	117	120	122	127

Note: Flow rates of Wade roof outlets have been established by full-scale tests. The values shown in the table are 75% of such tests. The design of the layout of roof outlets should be in accordance with the recommendations given in BS EN 12056:3.
