

Product Details

HSCE Slot Channel

Technical Data

Dimensions:

-

Materials - Stainless steel

Load Rating Class - A15

General Description:

Stainless Steel Hidden Slot Channel (Two 6mm wide slots with non-removable toe bar, suitable for use in barefoot areas; easily cleaned by directing a jet of water along the channel towards the outlet. HSCE is designed for use against a wall.). Hidden channels are suited for draining large areas finished with block paving and can be designed to accommodate a range of paving thicknesses (min. 15mm) and flow rate requirements.

Options:

To specify an option, add option letter(s) as a suffix to the Spec. Code

B - filter bucket

DSD - double secondary drainage

SSD - single secondary drainage

Materials:

Stainless Steel - Austenitic Grade 304 (Grade 316 optional on most products): Used for bodies, gratings, funnels, access covers, filter buckets and fixings. A corrosion-resistant metal containing significant amounts of nickel and chromium; AISI grade 304 stainless steel is used as standard, which is suitable for general use in and around buildings including most coastal locations. In applications such as swimming pools or having an aggressive atmosphere, grade 316 is recommended and is available optionally (if available, code 'M' will be listed under 'Options'). An even higher grade may be required for applications in highly corrosive environments including where exposure to seawater may be anticipated. Clean with soap and warm water rinse and wipe dry. Gratings may also be cleaned in certain dishwashers. Under no circumstances treat with metal scouring pads, metal scrapers or wire wool as these will contaminate surfaces leaving rust spots. Take care to cover stainless steel items when site work is going on, to avoid contamination with rust-inducing particles such as when mild steel or cast iron items are being cut.

All dimensions are in millimetres unless stated. In line with general practice all dimensions shown are nominal.
