

Product Details

P1424 Non-Trapped 90° Gully

Technical Data

Dimensions:

150 x 118 at finish level

257 x 138 body

8 - grating aperture width

203 - Overall Height

- depth body flange to outlet center line

Connection - female 4" BSP threaded connection (100mm)

Free Area - body= 78cm², grating= 40cm²

Materials - Grating - stainless steel; Body - cast iron, lacquered; Membrane Clamp - sherardized ductile iron

Load Rating Class - K3

Weight - 6.2 kg

General Description:

Non-Trapped 90° Gully, for use with tiles, marble, terrazzo, resin etc. flooring, with 4" BSP dia. horizontal outlet with 8mm grating aperture width. A flush fitting gully for use in areas where drainage is required at the junction of a wall and floor. A separate membrane clamping collar ensures a watertight seal.

Materials:

Cast Iron - BS EN 1561: Used for bodies, membrane clamping collars, spigot adaptors and accessories such as extensions. A widely used metal in the drainage industry, its resistance to corrosion permits extended use under extreme conditions. Castings are coated with a high grade lacquer paint to provide internal and external surface coverage. Paint will gradually wear off and is replaceable; oxidation (surface rusting) is a natural process which does not weaken the material. A zinc anti-corrosion coating is applied to certain castings by sherardizing.

Ductile Iron - BS EN 1563 + 1564: A casting with the ductility of steel, yet with more than twice the tensile strength of cast iron. A zinc anti-corrosion coating is applied by sherardizing.

Stainless Steel - Austenitic Grade 304 (Grade 316 optional on most products): Used for bodies, gratings, funnels, access covers, filter buckets and fixings. A corrosion-resistant metal containing significant amounts of nickel and chromium; AISI grade 304 stainless steel is used as standard, which is suitable for general use in and around buildings including most coastal locations. In applications such as swimming pools or having an aggressive atmosphere, grade 316 is recommended and is available optionally (if available, code 'M' will be listed under 'Options'). An even higher grade may be required for applications in highly corrosive environments including where exposure to seawater may be anticipated. Clean with soap and warm water rinse and wipe dry. Gratings may also be cleaned in certain dishwashers. Under no circumstances treat with metal scouring pads, metal scrapers or wire wool as these will contaminate surfaces leaving rust spots. Take care to cover stainless steel items when site work is going on, to avoid contamination with rust-inducing particles such as when mild steel or cast iron items are being cut.

All dimensions are in millimetres unless stated. In line with general practice all dimensions shown are nominal.
